

Younger Member Activity Report

June 16, 2009 – Kentucky Girls STEM Collaborative Girls' Day Out

Three of the younger members volunteered to set up a booth during the lunch portion of the Girls' Day Out event. There were approximately 50 middle and high school girls that stopped by to learn more about the civil engineering profession. We had brochures to pass out as well as two activities – building a paper bridge and making a water filter – for the girls to participate in.
